

## MEPOLETTE

The Mepolette® is a transfer marking, especially designed for labeling already vulcanized rubber products. This special elastomeric label is characterized by a high flexibility, an easy utilization and a multi-purpose applicability. Thanks to the rubber adhesive from the back side of the label, the transfer of the rubber layers is easy to carry out for everybody.

### Elastomeric article: Labelling of finished rubber products

Application area: clean, easy to use and ornamental labeling for already vulcanized rubber parts, to be used without any auxiliary materials

Colors: color scale (Pantone, HKS, RAL)

Color matching: matt

Rubber definition: applicable on all popular elastomeric types

Length: min. 20x20mm / max. 600x600mm (depending on application)

Thickness: > 0,02mm / ~20µm / ~0,78mil

Durability on stock: min. 1 year

Adhesion/Abrasion: self-adhesive, medium to good

Storage: dry, dark areas

Delivery form: cut according to format or pierced into geometrical form

Package: according to customer instructions

### Processing:

1. Define and clean the rubber surface
2. Apply Mepolette with its adhesive layer on the rubber
3. Transfer the label by rubbing and pressing
4. Take off slowly the release paper from one side. Ready!

### Characteristics & Advantages

Material: Special developed material with ideal transfer properties during mechanical handling. The material doesn't stick or brake down; therefore is warranted an ideal color transfer on the elastomeric product.

Customer individual product: The Mepolette® can be developed individually during different process parameters for each field of application. This way it is assured, that all its elements generate ideal results.
